

Agentic SDLC

From Copilot suggestions to autonomous development pipelines

“

**Debugging is twice
as hard as writing code.**

So if you write code as cleverly as possible,
you are, by definition,
not smart enough to debug it.

Brian Kernighan

That's where Copilot comes in...

Lab 03

Debugging & Troubleshooting

Objective

Learning Objective

Master GitHub Copilot as a debugging tool. You'll learn to find and fix bugs faster, explain unfamiliar code, generate documentation, troubleshoot failing tests, and automate the full debug cycle with Agent Mode.

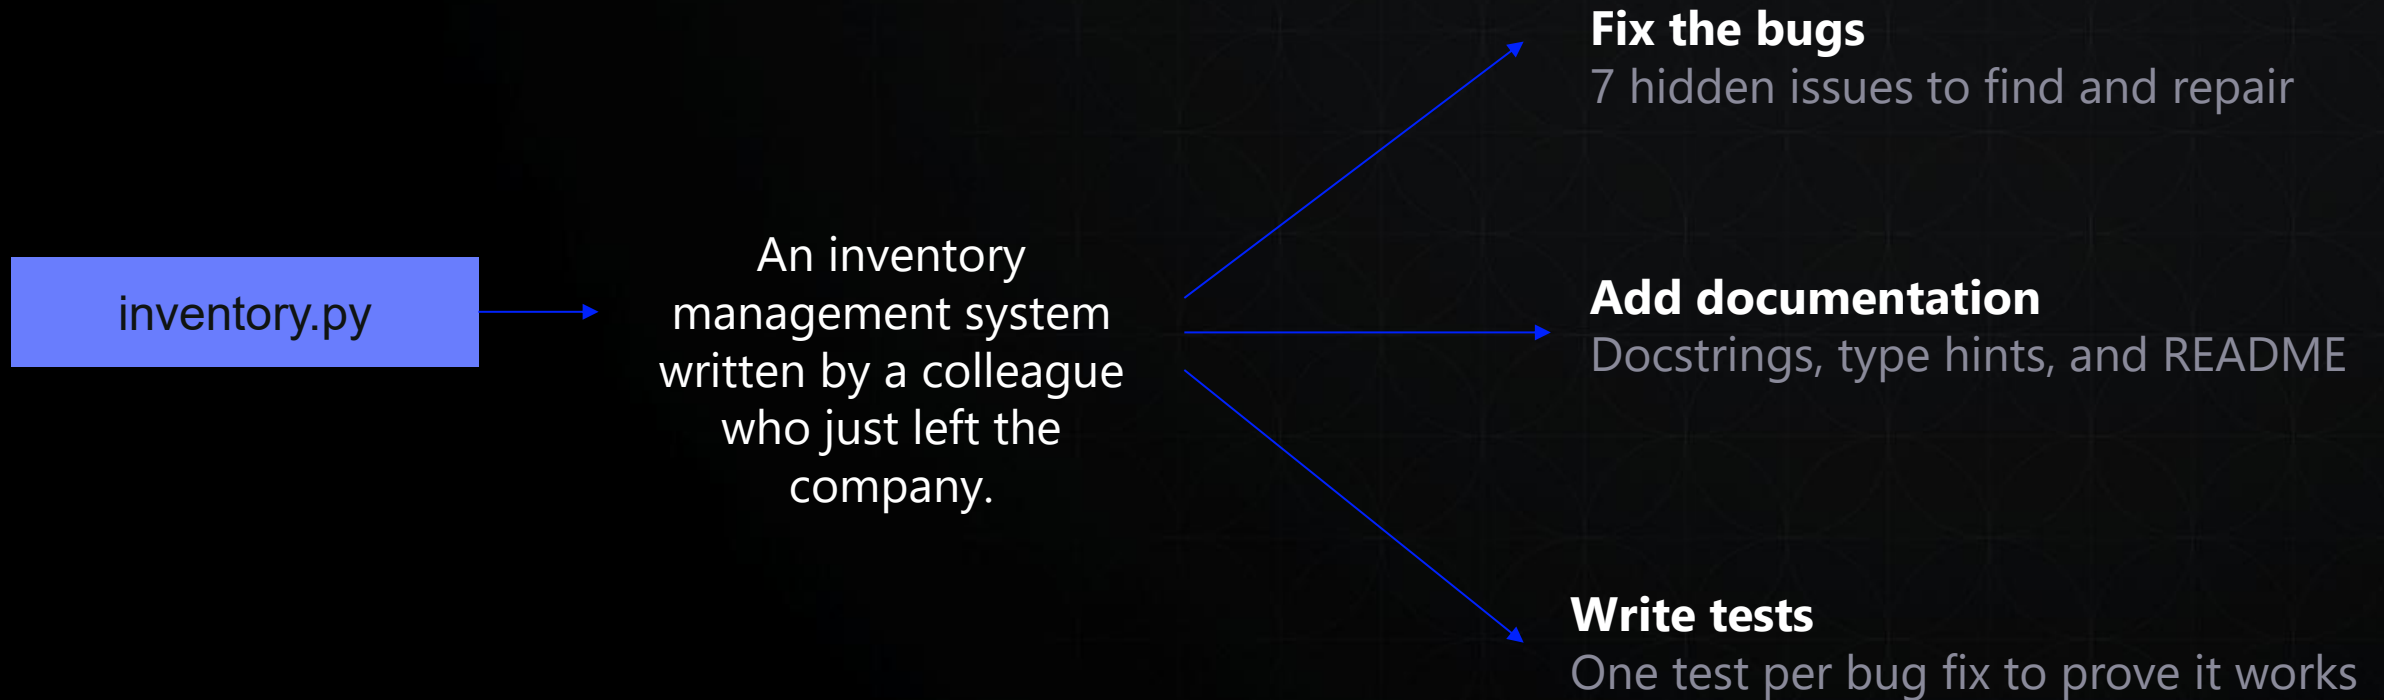

What You'll Practice

- Find and fix 7 bugs using /fix + Chat panel
- Explain unfamiliar code with right-click Copilot commands
- Generate docstrings, type hints, and README docs
- Troubleshoot failing tests with live debugger context (#locals)
- Automate the full debug cycle with Agent Mode
- Build a custom @bug-hunter agent and debugging skill

The Scenario

You've inherited a broken codebase. No docs. No tests. 7 bugs.

Let's get back to our repo...
